

As system gets more complicated it okay to separate them out so its clear which systems belong to what
I have included an example of one. Don't have to do it but it can help.

calculations shown and reasoning for pulling up or down

12V/pwr should point to sky

A bit cramped, I would space things out more

GND pointing down

you can group power flags and test points separately for cleaner looks

Label nets of the pins for the Attiny

Adjust footprint to have text in correct orientation

Wires shouldn't go over symbols

There is a button you can click in properties that puts an "x" over the part for DNP, its visually more clear
